Rollcall.ai
PAYROLL ASSURANCE

SYDNEY'S DEMO · 7 MINUTES

AI that has your back

Five use cases, end to end, in seven minutes

AI shouldn't replace the people who make payroll work. It should make sure they never miss anything. Sydney takes one real case through each of the five checks, start to finish, so the audience sees the whole loop every time.

It finds it → It explains it → A person decides → The result shows

0:00	0:40	1:15	2:15	3:10	4:20	5:15	6:10

Northloom Apparel sample cycle PR-2026-19 · fictional data

About 780 spoken words · about 135 a minute with pauses

BEFORE SYDNEY STARTS

Set the stage

About 5 minutes before the audience joins.

- [ ] **Reset the demo**
  Click your name at the top right → Reset demo, so all five cases start open.
- [ ] **Enter the team password**
  Open https://payroll-assurance-eight.vercel.app and enter it ahead of time. Leave the sign-in page on screen.
- [ ] **Check the AI is connected**
  Open Ask AI and look for “written by gpt-oss-120b on Groq” under the title, then close it. Use case 3 needs it.
- [ ] **Zoom to about 110%**
  Close other tabs and turn off notifications.
- [ ] **Keep the notes short**
  The five notes are in the script. Type them as written, or paste them from this PDF.
- [ ] **Running the full demo after?**
  Reset the demo again first. It uses different people (Kayla, Daniel, Ethan and Diego), but the counts will have moved.

SEVEN MINUTES

Run of show

An opening, the five use cases in the order the app runs them, and a close.

TIME	PART	THE CASE AND THE SCREENS
0:00–0:40	**Open with a person**	Sign-in page → My work
0:40–1:15	**What AI is for**	Overview: the five checks
1:15–2:15	1 · FeedPulse	Late schedules file · Aaliyah Brooks, no check-out
2:15–3:10	2 · RunRadar	Rachel Adler, salaried, paid overtime
3:10–4:20	3 · Variance Voice	Grace Okafor, sick time beyond balance · Explain with AI
4:20–5:15	4 · Three-Way True	NJ tax remittance short $535.31
5:15–6:10	5 · FixFlow Clusters	Overtime at straight time, Secaucus · Omar Haddad
6:10–7:00	**Where that leaves you**	My work → Activity log → Overview

EVERY USE CASE, THE SAME LOOP

Four beats per case

The coloured tag above Sydney's lines shows which beat she's on. Same rhythm, five times, so the audience always knows where they are.

FINDS

The check finds it

Where it was caught, and how.

EXPLAINS

It shows why

The records it read and the policy that applies.

A PERSON DECIDES

Someone makes the call

A short note, then Approve.

RESULT

The change shows

A count drops, a dollar figure falls, the log fills.

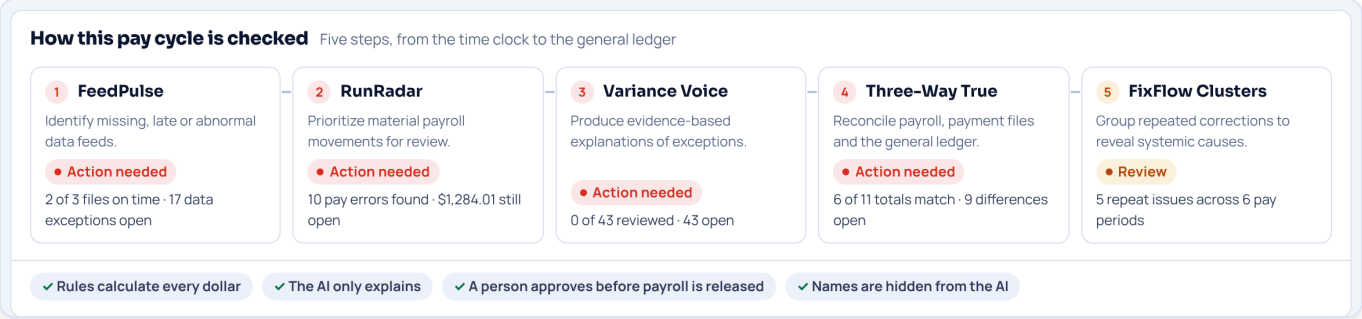

Open with a person

0:00 – 0:40

SYDNEY SAYS	ON SCREEN AND WHAT TO CLICK
Think about the last time you got paid. You probably didn't think about it at all. It just showed up, on time, the right amount.	**ON SCREEN** The **sign-in page**. **DO** Nothing. Let the brand sit on screen.
Behind that, someone checked hundreds of numbers against a deadline that doesn't move. And when one slips, it isn't a spreadsheet error. It's someone's rent.	**ON SCREEN** Sign-in page. **DO** Nothing. *Pause after "rent."*
That person, the one checking everything so nobody else has to, is who we built Rollcall.ai for.	**ON SCREEN** **My work**: the greeting and the queue. **DO** **Employer** → **Payroll ops** → **Sign in**, landing on "built Rollcall.ai for."

What AI is for

0:40 – 1:15

Overview: the five checks, with the four rules underneath

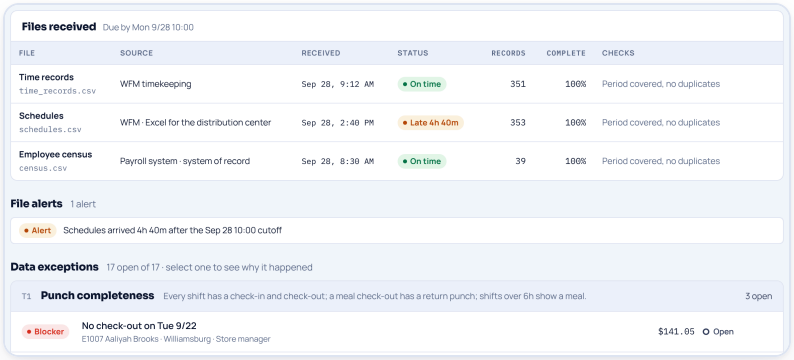

SYDNEY SAYS	ON SCREEN AND WHAT TO CLICK
We didn't build AI to replace that person. We built it to have their back. The machine reads everything and never gets tired. The person brings judgment. **So Rollcall does the reading, and people make the calls.**	**ON SCREEN** My work. **DO** Nothing.
It works in five steps, from the time clock to the general ledger. I'll take one real case through each, start to finish: what it finds, how it explains it, what a person decides, and what changes.	**ON SCREEN** **Overview**: "How this pay cycle is checked," the five checks. **DO** Click **Overview**. Sweep across the five checks, left to right.

USE CASE 1 OF 5

1 FeedPulse

Identify missing, late or abnormal data feeds.

1:15 – 2:15

FeedPulse: the late schedules file, the alert, and Aaliyah's missing check-out

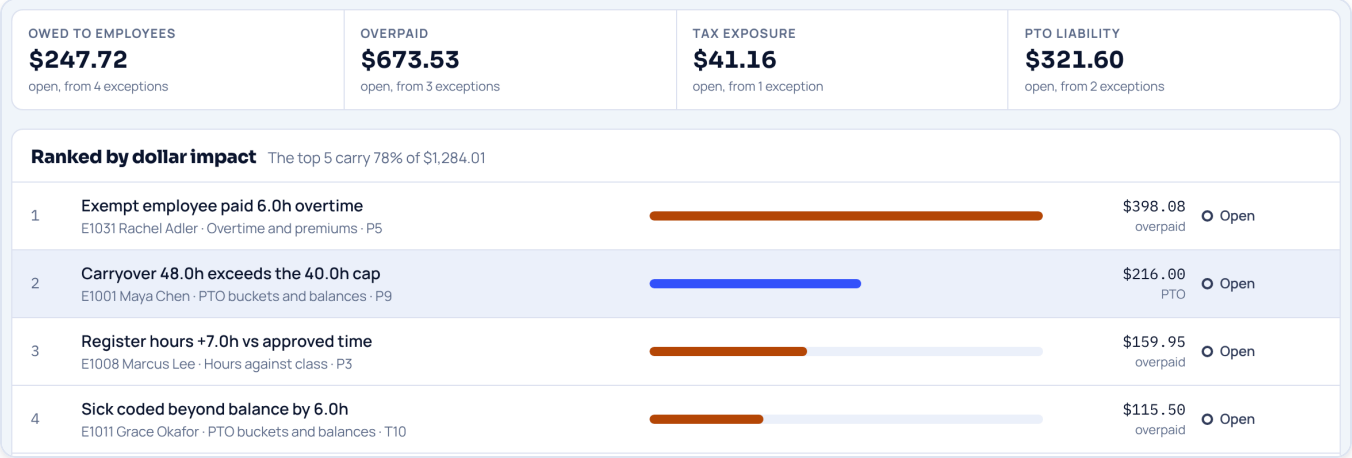

SYDNEY SAYS	ON SCREEN AND WHAT TO CLICK
FINDS Step one, FeedPulse, checks the data before anyone checks a paycheck. Did every file arrive, complete and on time? Here, the distribution center's schedules came in four hours and forty minutes late, and it says so before anyone builds payroll on them.	**ON SCREEN** **FeedPulse**: Files received, with Schedules **Late 4h 40m**, and the file alert under it. **DO** Click **FeedPulse** under Checks. Point at "Late 4h 40m," then the alert.
EXPLAINS It reads every punch, too. Aaliyah Brooks checked in at 11:05, took lunch, and never checked out, so the time clock gave Aaliyah zero hours for a seven-hour shift. It shows the punches it read, and the handbook rule: the store manager corrects missed punches, with a reason.	**ON SCREEN** The case opens on the right: **Variance Voice**, then the **HB 3.3** policy. **DO** Scroll to Data exceptions and click **No check-out on Tue 9/22**.
A PERSON DECIDES The store manager confirms the check-out time. Payroll writes that down and approves.	**ON SCREEN** **Work this item** and **Note**, lower in the right panel. **DO** Type *"Store manager added the missed 7:00 PM check-out."* Then **Approve**.
RESULT **That's a full day's pay that would have gone missing, caught before payday.**	**ON SCREEN** The toast "Approved: No check-out on Tue 9/22," and the FeedPulse count in the sidebar: **17 → 16**. **DO** Point at the toast, then the sidebar count.

USE CASE 2 OF 5

2 RunRadar

Prioritize material payroll movements for review.

2:15 – 3:10

RunRadar: dollar totals, then every pay error ranked by impact

SYDNEY SAYS

FINDS

Step two, RunRadar, asks which problems change someone's pay, and by how much. It puts a dollar figure on every one and ranks them, so you start with what matters. Here, the top five carry 78 percent of the money.

EXPLAINS

Number one: a salaried store manager was paid $398 of overtime. Salaried managers don't get overtime. Their pay doesn't change with hours. It shows the employee record, the hours, the payroll line and the policy.

A PERSON DECIDES

Payroll takes the overtime off before anything goes out, notes it, and approves.

RESULT

Open overpayments drop from $673 to $275, before a dollar leaves the bank.

ON SCREEN AND WHAT TO CLICK

ON SCREEN

RunRadar: the four totals, then **Ranked by dollar impact**.

DO

Click **RunRadar** under Checks. Point at "The top 5 carry 78%."

ON SCREEN

Rachel Adler's case: Variance Voice, then **HB 4.2 Overtime**.

DO

Click row 1, **Exempt employee paid 6.0h overtime**.

ON SCREEN

Work this item and Note.

DO

Type *"Removed the 6.0h of overtime before release."* Then **Approve**.

ON SCREEN

RunRadar again: **Overpaid $275.45**, down from $673.53.

DO

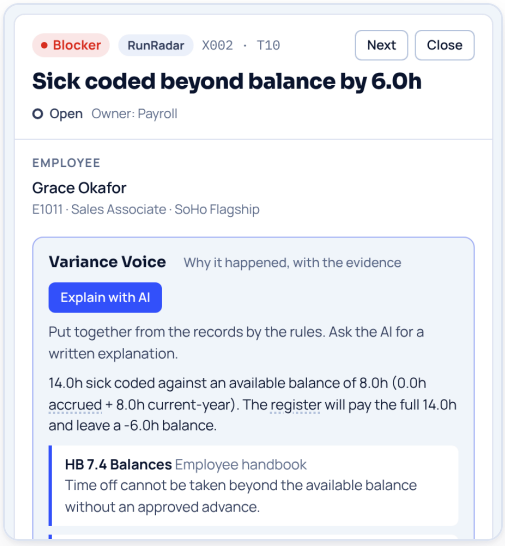

Click **RunRadar** under Checks. Point at Overpaid.

USE CASE 3 OF 5

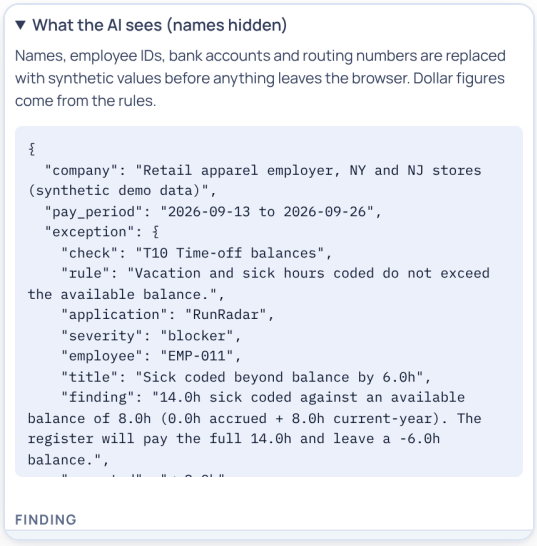

3 Variance Voice

3:10 – 4:20

Produce evidence-based explanations of exceptions.

Grace's case, with Explain with AI

What the AI sees: no names, only "EMP-011"

SYDNEY SAYS	ON SCREEN AND WHAT TO CLICK
FINDS Step three, Variance Voice, is where the AI does its best work. Grace Okafor was paid for fourteen hours of sick time, with eight hours left in the balance.	**ON SCREEN** Grace's case opens in the **Review queue**. **DO** Click **My work**, then the first row, **Sick coded beyond balance by 6.0h**.
EXPLAINS Instead of a reviewer digging through the records, the AI writes it up in plain English. Every sentence points to the record it came from. Click a reference, and you're looking at the original.	**ON SCREEN** The AI's explanation, with "Written by gpt-oss-120b on Groq … with names hidden" above it. **DO** Click **Explain with AI**. When it appears, click one of the **R1** references.
EXPLAINS And this is exactly what the AI was given. No names: Grace is just "EMP-011." **The dollar figures come from the rules, not the AI.**	**ON SCREEN** **What the AI sees (names hidden)**. **DO** Scroll the right panel down and open "What the AI sees." Point at "EMP-011."
A PERSON DECIDES The reviewer reads the evidence, recodes the extra six hours as unpaid, writes why, and approves. **The AI explained. A person decided.**	**ON SCREEN** Work this item and Note. **DO** Close "What the AI sees." Type *"Recoded 6.0h from sick to unpaid."* Then **Approve**.

USE CASE 4 OF 5

4 Three-Way True

Reconcile payroll, payment files and the general ledger.

4:20 – 5:15

Payroll register, bank and ledger side by side

LINE	PAYROLL REGISTER	BANK AND ACH	GENERAL LEDGER	RESULT
Net pay	$47,718.16	$47,718.16 Funding pull	$47,718.16 1010 cash	Matches
Net pay settled by ACH	$47,718.16	$46,467.60 ACH credits less returns	–	Off by −$1,250.56 F3 · Treasury
Withholdings and employer taxes	$20,660.24	$20,124.93 Tax remittances	$20,124.93 2200 taxes payable	Off by −$535.31 F6 · Treasury
· FED-940	$24.80	$24.80 Remitted	–	Matches
· FED-941	$16,854.68	$16,854.68 Remitted	–	Matches
· NJ	$1,448.53	$913.22 Remitted	–	Off by −$535.31
· NY	$2,332.23	$2,332.23 Remitted	–	Matches

Three-Way True: payroll, bank and ledger side by side, with the NJ line off by $535.31

SYDNEY SAYS

FINDS

Step four happens after the money moves. Three-Way True lines up three records that should agree: what payroll says, what the bank actually sent, and what the ledger recorded. Most lines match. New Jersey taxes don't.

EXPLAINS

Payroll owed New Jersey $1,448. Only $913 was sent. The gap, $535.31, is exactly the employer's state unemployment tax. The processor isn't sending it, and left alone, that turns into penalties and interest.

A PERSON DECIDES

Treasury has the processor send the balance with the next deposit, notes it, and approves.

RESULT

A tax problem caught this week, not months from now in a letter from the state.

ON SCREEN AND WHAT TO CLICK

ON SCREEN

Three-Way True: the side-by-side table, and the **NJ** row, **Off by −$535.31**.

DO

Click **Three-Way True** under Checks. Point at the NJ row.

ON SCREEN

The case: owner **Treasury**, policy **FIN 3.1 Tax remittance**, and the bank records.

DO

Scroll to Differences to fix and click **NJ remittance short by $535.31**.

ON SCREEN

Work this item and Note.

DO

Type *"Processor sends the $535.31 with the next deposit."* Then **Approve**.

ON SCREEN

The toast, and the Three-Way True count in the sidebar: **9 → 8**.

DO

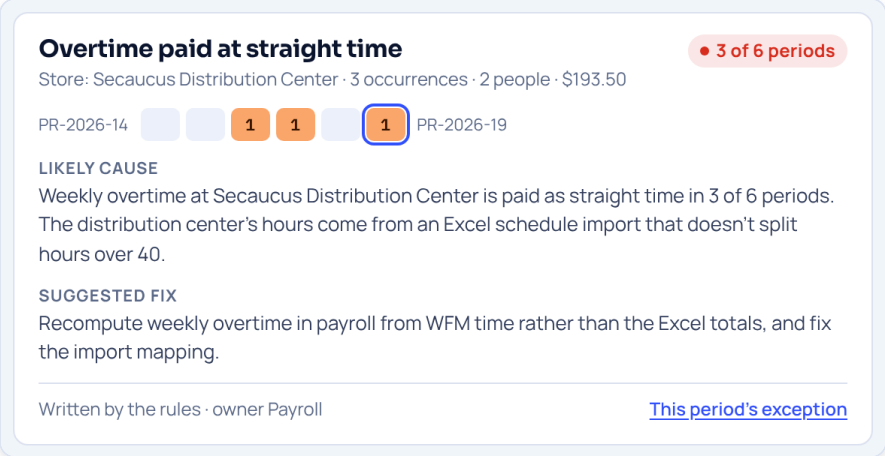

Point at the sidebar count.

USE CASE 5 OF 5

5 FixFlow Clusters

5:15 – 6:10

Group repeated corrections to reveal systemic causes.

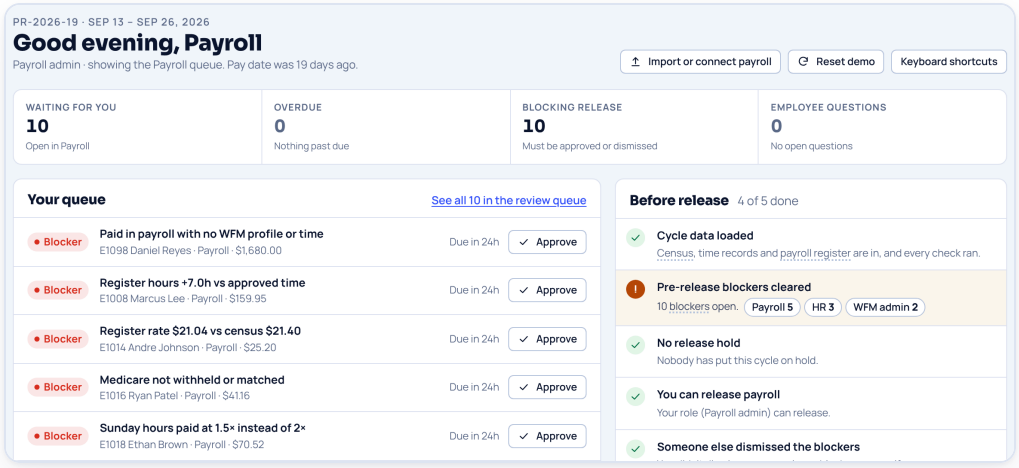

FixFlow Clusters: the same mistake in 3 of 6 pay periods, with the likely cause and the fix

SYDNEY SAYS	ON SCREEN AND WHAT TO CLICK
FINDS Step five looks back. FixFlow Clusters asks what keeps going wrong. It reads six pay periods and groups the repeats. Here: overtime paid at straight time at the Secaucus distribution center, in three of the six.	**ON SCREEN** **FixFlow Clusters**: the **Overtime paid at straight time** card, "3 of 6 periods." **DO** Click **FixFlow Clusters** under Checks. Scroll to the card.
EXPLAINS Remember the late schedule file from step one? Same place. Their hours come in from an Excel import that doesn't split anything over forty into overtime. So people get underpaid, period after period, and someone fixes it by hand every time.	**ON SCREEN** **Likely cause**, then **Suggested fix**. **DO** Point at each. *Optional:* **Suggest causes with AI** at the top of the page.
A PERSON DECIDES This period it's Omar Haddad: six hours of overtime paid at straight time. Payroll pays it correctly, approves, and notes the real fix. **Change the import, and it stops coming back.**	**ON SCREEN** Omar Haddad's case in the Review queue. **DO** Click **This period's exception** on the card. Type *"Paid at 1.5x. Fixing the Excel import."* Then **Approve**.

Where that leaves you

6:10 – 7:00

My work after the five cases: 10 blockers left, down from 14

SYDNEY SAYS	ON SCREEN AND WHAT TO CLICK
RESULT Five steps, five real problems. Each one found, explained, decided by a person, and written down. Ten blockers left before payroll can go out, down from fourteen, and every one has an owner.	ON SCREEN **My work**: Blocking release **10** (it was 14), and Before release. DO Click **My work**.
Every decision is in the activity log: who, when, and why. And any of it can be reopened.	ON SCREEN **Activity log**: the five approvals, each with its note. DO Click **Reports** → **Activity log**.
Through all of it, four lines never moved. **The rules did the math. The AI only explained. A person approved every decision. And the AI never saw a name.**	ON SCREEN **Overview**: the four labels under the five checks. DO Click **Overview**. Point at each label as she says it.
AI won't account for everyone. People do that. What AI can do is make sure no one gets missed. That's what we mean by *Everyone Accounted For.*	ON SCREEN Overview. DO Hold still. Then take questions.

ON THE DAY

Notes for Sydney

Say the step number
"Step one, FeedPulse…" Five clear chapters are easier to follow than one long tour.

Use the names
Aaliyah, Rachel, Grace, Omar. People remember a person, not an exception number.

Land each result
The bold line at the end of each case is the payoff. Pause after it.

Skip the jargon
No "platform," "enterprise," "end-to-end," "seamless" or "leverage."

FOR WHOEVER DRIVES

Driving tips

Type the note, then Approve
Approve sits just above the Note box. The note is saved with the approval.

Ignore what opens next
After Approve, the next case opens on its own. Leave it and go to the next step.

Grace is on My work
Use My work's first row for use case 3. The Review queue opens another case first.

If the AI is slow or fails
The rules' explanation is already on screen. Point at it and keep going.

Slow cursor, click on the key word
The screen should change as she says it.

Running long?
Skip the optional Suggest causes with AI, and the RunRadar recheck in use case 2.

Everyone Accounted For.
